Factory Treated Building Information and Maintenance Guide

All of our factory treated buildings have been dipped in a preservative pre-treatment which gives an orange/tan appearance. The preservative pre-treatment will not offer full timber protection and will need to be coated with second stage treatment within 2 months of installation.

Shed City recommended Barretine Premier wood preserver to prolong the life and appearance of your timber building whilst giving a water-proof coating. The colours available are Clear, Golden Brown, Red Cedar, Light Brown, Dark Brown and Holly Green.

Barretine Premier wood preserve is an advanced solvent based micro-porous timber treatment. It creates a long lasting, waterproof wood coating that is friendly to its environment. It is child, pet and plant friendly, low odour with low VOC's.

Suitable for all types of wood, rough or planed timber, and is dry in thirty minutes (perfect for the unpredictable British weather).

For the first treatment, two coats are recommended and will give a traditional matt finish. It can be used on all exposed timber and for ultimate performance it's advised a preservative pre-treatment has been used, which all our dip treated buildings are supplied with.
